Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1, 2023, to December 31, 2023.

Section 1 - Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

Conflict Minerals Disclosure

This Form SD of Labcorp Holdings Inc. and its consolidated subsidiaries (the "Company") is filed pursuant to Item 1.01 of Form SD-13p-1 under the Securities Exchange Act of 1934, as amended (the "Rule"), for the reporting period from January 1, 2023 to December 31, 2023.

The Rule requires disclosure of certain information when a company manufactures, or contracts to manufacture, products for which minerals specified in the Rule are necessary to the functionality or production of the product. The specified minerals are cassiterite, columbite-tantalite, wolframite and gold, including their derivatives, but are limited to tin, tantalum and tungsten ("3TG"). The "Covered Countries" for the purposes of the Rule are the Democratic Republic of the Congo, the Republic of the Congo, the Central African Republic, South Sudan, Uganda, Burundi, Tanzania, Zambia and Angola.

The Company determined that in the period beginning January 1, 2023 through December 31, 2023, the products it manufactured, or contracted to manufacture, drug testing cards, male fertility kits, and test system servers. 3TG are necessary to the functionality or production of the product. The drug testing cards use a derivative of tin, and male fertility kits include a centrifuge device that uses solder containing trace amounts of tin, and the test system servers contain a 3TG mineral. As a result of this determination, the Company conducted a good faith country of origin inquiry (the "RCOI") to determine whether the 3TG found in the products originated in the Covered Countries or are from recycled or scrap sources.

The elements of the Company's RCOI were: the identification of the suppliers of the 3TG contained in the products; data collection; and the assessment to determine whether further due diligence was required.

- Identification of the suppliers: The Company identified three direct suppliers of the 3TG contained in the products (the "Covered Suppliers").
 - Data collection: To collect information on the 3TG contained in the Company's products, the Company sent a questionnaire which requested information on the origin of the 3TG, including (i) whether the 3TG originated in the Covered Countries, (ii) whether the 3TG came from recycled or scrap sources and (iii) whether the 3TG came from other upstream suppliers (the "Questionnaire"). The Company sent the Questionnaire to the direct suppliers and also requested that the direct suppliers send the Questionnaire to the upstream suppliers of the 3TG in their supply chain. The Company received responses from two of the three Covered Suppliers.
 - Assessment: Responses from the Covered Suppliers were reviewed by the Company to assess the adequacy of the responses.

Based on the data collected by the Company through the RCOI, the Company determined that there is no reason to believe that the necessary gold used in its drug testing cards manufactured between January 1, 2023 and December 31, 2023 may have originated in Covered Countries. However, with respect to the male fertility kits, the Company determined that it does have reason to believe that the necessary tin may have originated in Covered Countries. Accordingly, the Company took additional due diligence measures, including sending inquiry letters to the upstream supplier of tin and subsequently to an upstream supplier, to gain clarity on information relating to the compliance status of the tin used in the male fertility kits. The Covered Supplier provided a response to the inquiry. However, the Company has not been able to determine with reasonable certainty the country of origin of the tin used by its Covered Supplier, as the upstream supplier for the Covered Supplier did not respond to the request for additional information and a Conflict Minerals Reporting Template. Additionally, with respect to the test system servers, the Company determined that it does have reason to believe that the necessary 3TG minerals may have originated in Covered Countries. Accordingly,

the Company took additional due diligence measures, including sending an inquiry letter to the Covered 3TG mineral, to gain clarity on information relating to the source and compliance status of the 3TG mineral testing system servers. The Covered Supplier did not respond to the Company's request for additional information to complete a Conflict Minerals Reporting Template. The Company is not filing disclosure under Item 1.01(c) of Part 101 of Regulation S-K in accordance with the "Updated Statement on the Effect of the Court of Appeals Decision on the Conflict Minerals Rule" issued by the Division of Corporation Finance of the Securities and Exchange Commission on April 15, 2016.
